Project Overview

Developed an interactive HR Analytics Dashboard in Power BI to examine employee attrition patterns across 1,417 employees. The project performs statistical analysis on age, salary, job role, and years of experience to identify the key factors driving employee turnover, supporting data-driven workforce planning and retention strategies.

Key Findings

- Sales Representatives**
40% attrition — highest risk role
- Low salary (0–3 LPA)**
31% attrition vs 9% for high earners
- Year 1 employees**
34% attrition — new hire shock pattern
- Male employees**
63.2% of all attrition cases
- Administration dept**
36% of total attrition by department
- Job satisfaction score 1**
Highest attrition across all roles
